

## Press Releases - PX-DM300

Brussels, 30th of May 2007

### New CD/DVD duplicator - ideal for marketing departments, offices and schools

Plextor today announces its first CD/DVD duplicator ideal for offices of all sizes – particularly marketing departments, schools, Government, agencies etc. It is the only one available on the market with such a compact design as it features Plextor slimline slot-loading CD/DVD ReWriter drives.

Enabling fast copying of up to three CDs/DVDs at once, the Plextor PlexCopier PX-DM300 does not require a PC as it is a stand alone unit – therefore it does not tie up any of the office computers, and helps to increase office productivity.

The PlexCopier PX-DM300 features an intuitive interface and as such is extremely easy to use - simply follow the steps on the LCD display. It is perfect for copying all types of office data such as electronic brochures, presentations, video footage, multimedia files and databases.

Rudy de Meirsman, Sales & Marketing Manager of Plextor Europe, says: **“The PlexCopier is unique as it has such a compact footprint through the building in of our own slimline slot-in drives. It is both fast and convenient for any office that duplicates discs. As it is standalone, never again will staff complain their PCs are running slow for duplication purposes.”**

The PlexCopier is a versatile unit. As well as duplication, it performs other functions - **comparison** (checking data on the media are the same; it can compare three discs simultaneously), **verification** (checks for errors on media) and **erasing** (erases data stored on CD-RW/ DVD+/-RW).

Ideal for a modern office environment, the PlexCopier comes in a contemporary silver and black design with an aluminum front panel.

The PlexCopier consists of one source drive and three fast Plextor PX-608AL dual-layer multi-format (DVD+/-R and DVD-RAM) drives – all slimline and slot-loading. Recently, Plextor were first to launch these space-saving optical drives for desktop PCs and other applications.

### PlexCopier PX-DM300 Key Features:

### About Plextor

*Plextor is a leading international manufacturer of extremely reliable, high quality recording equipment and is also one of the pioneers in the field of CD technology. From its parent company, Shinano Kenshi Co. Japan, Plextor has a built up tradition in the development and manufacture of advanced hardware and electronic precision equipment going back to 1918. With head offices in Japan, Europe and the United States the company mainly sells its products through a network of specialised computer dealers. Plextor Europe, established in Brussels, takes responsibility for sales, marketing and technical support in Europe, the Middle East and Africa. Since opening its Brussels office in 1994, Plextor has introduced a number of award winning products, including CD/DVD-ROM drives, CD/DVD recordable drives, CD/DVD media and USB Flash Memory Drives (PlexFlash). In addition to optical storage, flash memory and, more recently, digital video converters, Plextor is now offering portable hard disks for any user requiring extra mobile storage and a professional network hard disk for small businesses.*
